

## BinTrac®

### Breeder Control

*Replaces mechanical scales with an integrated solution for bin filling, batching and feed tracking.*

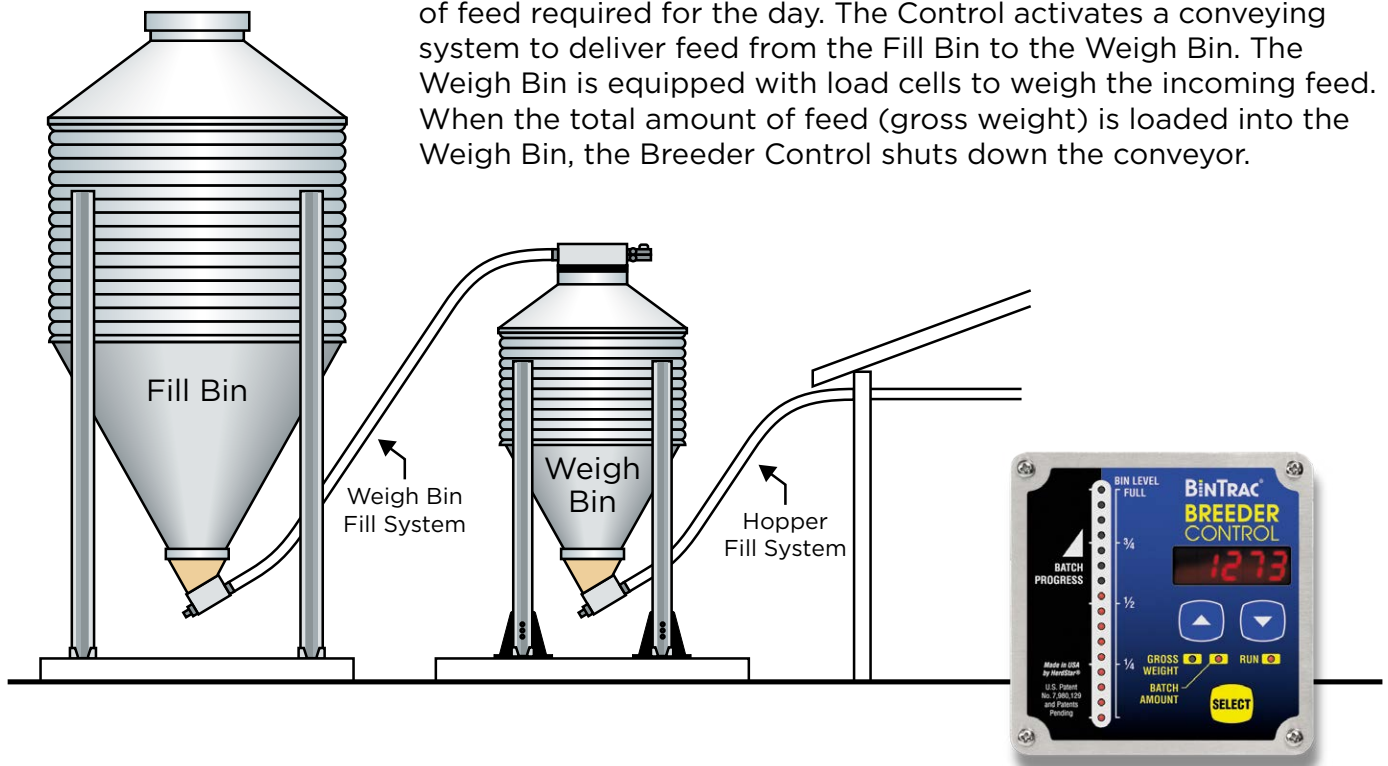

#### **BinTrac Breeder Control Features:**

- ▶ Displays current weight
- ▶ Automatically detects bin fill event
- ▶ Logs fills
- ▶ Provides daily feed use
- ▶ User programmable batch weight
- ▶ Scheduled batching
- ▶ Works with most feed line control systems
- ▶ Illuminated bin level/batch progress indicator

*For details see reverse ▶*

## Gain-in-weight Configuration (Load Batch Method)

The BinTrac Breeder Control allows the user to select the amount of feed required for the day. The Control activates a conveying system to deliver feed from the Fill Bin to the Weigh Bin. The Weigh Bin is equipped with load cells to weigh the incoming feed. When the total amount of feed (gross weight) is loaded into the Weigh Bin, the Breeder Control shuts down the conveyor.

## Loss-in-weight Configuration (Unload Batch Method)

In a single bin system, the BinTrac Breeder Control allows the user to select the amount of feed required for the day. The Control enables the hopper/feed line fill system to draw directly from the bin until the required amount of feed has been delivered into the house. When the total amount of feed has been delivered, the Breeder Control shuts down the feed line system.
